Responding to Shipment

Delays:

The Roles of Operational Flexibility  
& Lead-time Visibility

---

Aditya Jain

Indian School of Business

---

# Shipment Delays

- Complex Logistics of Global Sourcing
- Port Congestion due to High Trade Volumes
- New Security Measures for Custom Clearance
- External Causes (Weather, Labor Strikes etc)

---

# How do Firms Respond?

- Higher Inventory Levels
- Expediting Shipments
- Back-up Sourcing

## Role of Information Technology

---

# Literature (Supply Uncertainty)

- Song and Zipkin (1996), Chen and Yu (2005)
  - Stochastic Lead-time, Information Sharing
- Anupindi and Akella (1994)
  - Yield and Lead-time uncertainty, Dual Sourcing
- Tomlin (2005), Tomlin and Snyder (2006)
  - Mitigation & Contingency Strategies for Supply Chain Disruptions

# Basic Model

$$\Pr(\mathcal{L} = l) = \Theta$$

$$\Pr(\mathcal{L} = L) = 1 - \Theta$$

$$L > l$$

Periodic Review Inventory Policy : Review Period Length  $T$

Stochastic Demand  $D_{(t_1, t_2]}$

---

# Response Strategies : Two Dimensions

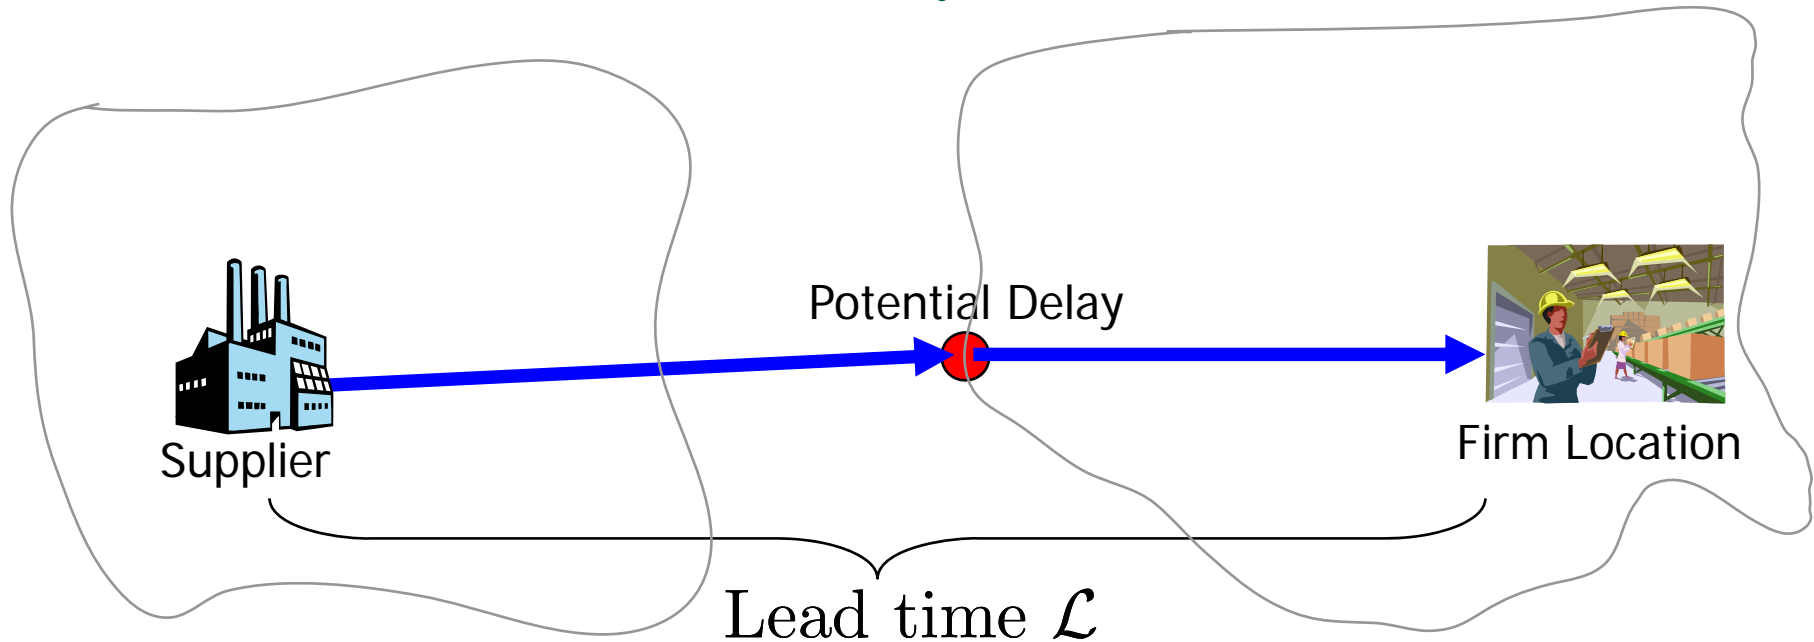

- Operational Flexibility
  - Additional Resources for Faster Replenishment
  
- Lead-time Visibility
  - Information on Lead-time in Advance

---

# Operational Flexibility

- Zero Operational Flexibility
  - No additional resources..
- Logistics Flexibility
  - Expedite Orders using Faster Transportation Mode
- Sourcing Flexibility
  - Order with a Faster and Expensive Alternative Supplier

# Lead-time Visibility

$L_i$  : Time at which the realization of lead-time is learned

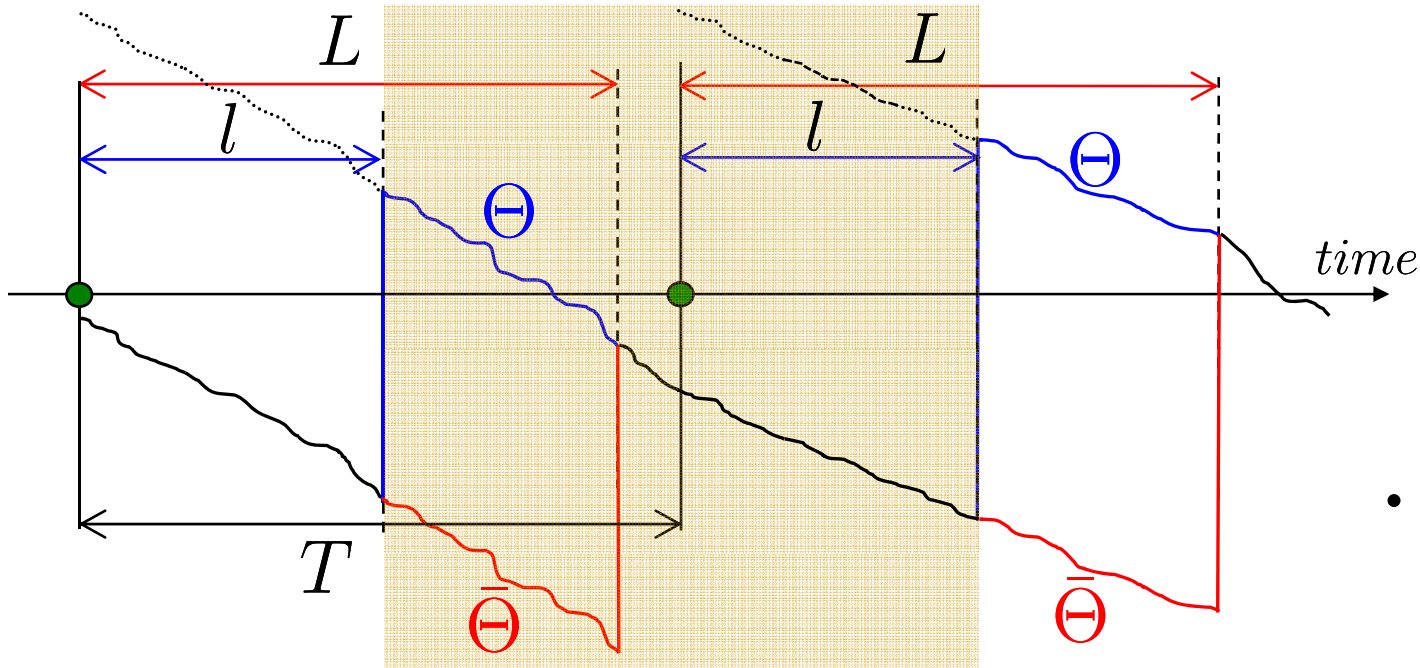

# Zero Operational Flexibility

$L_i > 0$  No Lead-time Visibility

$L_i = 0$  Full Lead-time Visibility: Place Orders with Full Information

# No Lead-time Visibility (Base Case ZN)

- Base-stock policy

$$\text{Cost} = \Theta \int_l^L G(S, D_{(0,t]}) dt + \bar{\Theta} \int_l^L G(S - D_{(-T,0]}, D_{(0,t]}) dt + \int_L^{l+T} G(S, D_{(0,t]}) dt$$

$$\text{where } G(S, D_{(0,t]}) = \mathbb{E} [h(S - D_{(0,t]})^+ + p(D_{(0,t]} - S)^+]$$

# No Lead-time Visibility (Base Case ZN)

- Base-stock policy

$$\text{Cost} = \Theta \mathcal{G}_{(l, l+T]}(S) + \bar{\Theta} \mathcal{G}_{(L, L+T]}(S)$$

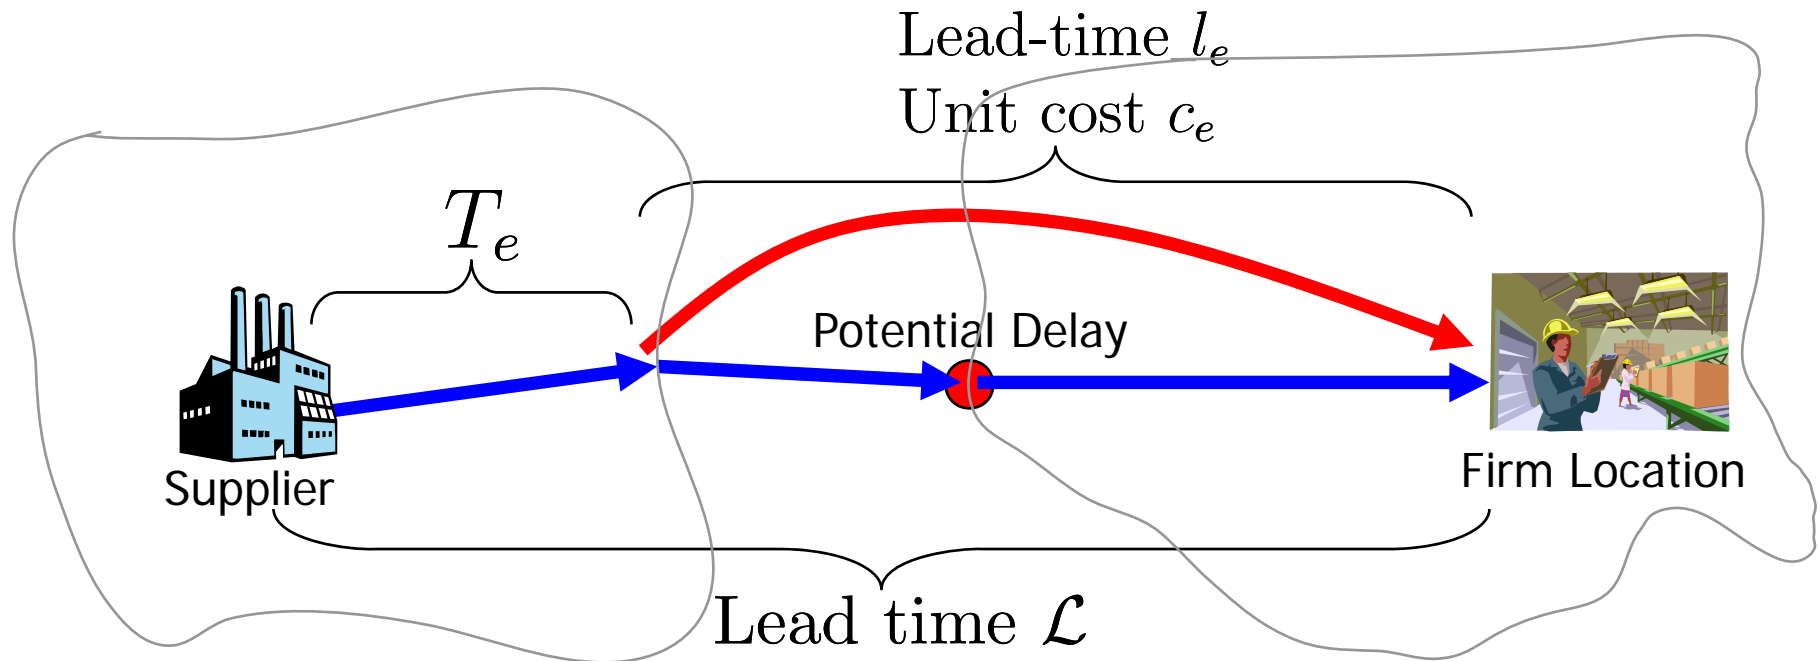

$$\text{where } \mathcal{G}_{(t_1, t_2]}(S) = \int_{t_1}^{t_2} G(S, D_{(0, t]}) dt$$

# Full Lead-time Visibility (Strategy ZF)

$L_i = 0$  Lead-time Dependent Base-stock Policy is Optimal  
(Song and Zipkin 1996)

# Logistics Flexibility

# Logistics Flexibility: Time Line

Ordering Decision

Expediting Decision

# Logistics Flexibility

## No Lead-time Visibility (Strategy LN)

$$T_e < L_i$$

Ordering Decision

Expediting Decision

Both Decisions are made  
without Lead-time Information

# No Lead-time Visibility (Strategy LN)

Single Period Cost

$$\mathcal{G}_{(T_e+l_e, l]}(x + q) + \Theta \mathcal{G}_{(l, L]}(x + Q) \\ + \bar{\Theta} \mathcal{G}_{(l, L]}(x + q) + \mathcal{G}_{(L, T+T_e+l_e]}(x + Q)$$

# No Lead-time Visibility (Strategy LN)

- Optimal Policy

# Logistics Flexibility

## Partial Lead-time Visibility (Strategy LP)

$$0 < L_i \leq T_e$$

Ordering Decision

Made without Lead-time Information

Expediting Decision

Made with Lead-time Information

# Partial Lead-time Visibility (Strategy LP)

No Shipment Delay

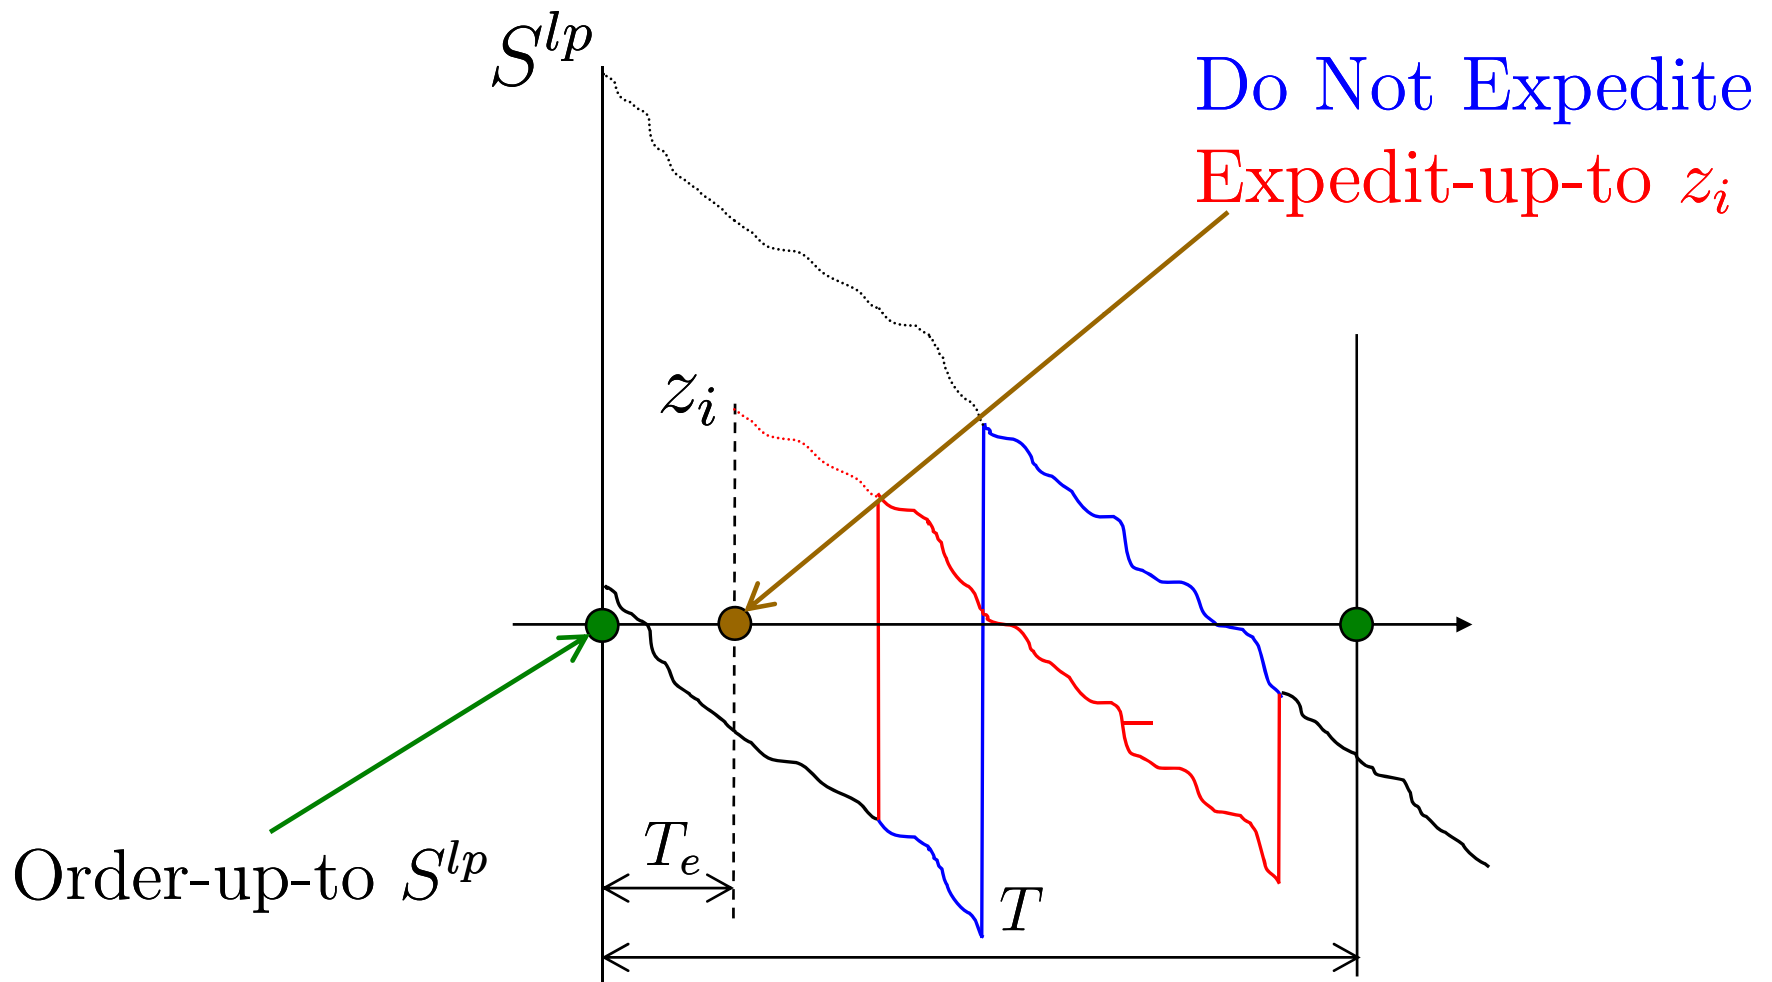

Not Optimal to Expedite

Shipment Delay

Optimal to Expedite

# Partial Lead-time Visibility (Strategy LP)

- Optimal Policy

# Logistics Flexibility

## Full Lead-time Visibility (Strategy LF)

$$L_i = 0$$

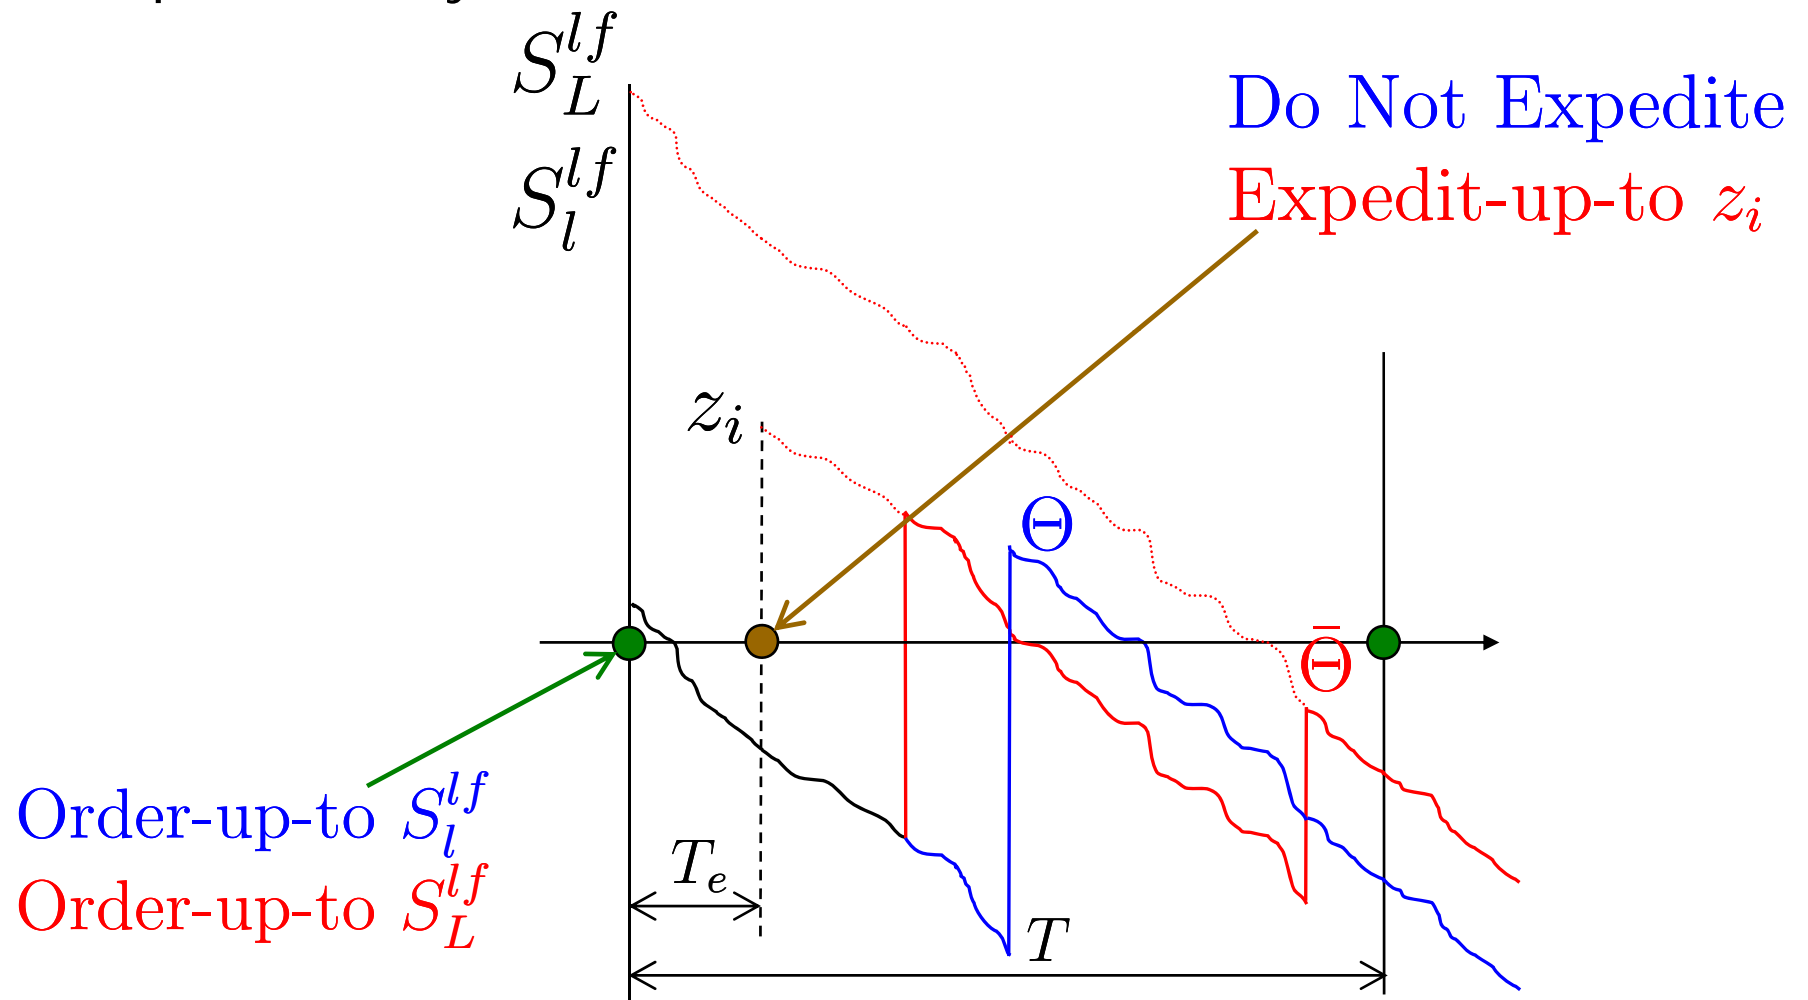

Ordering Decision

Expediting Decision

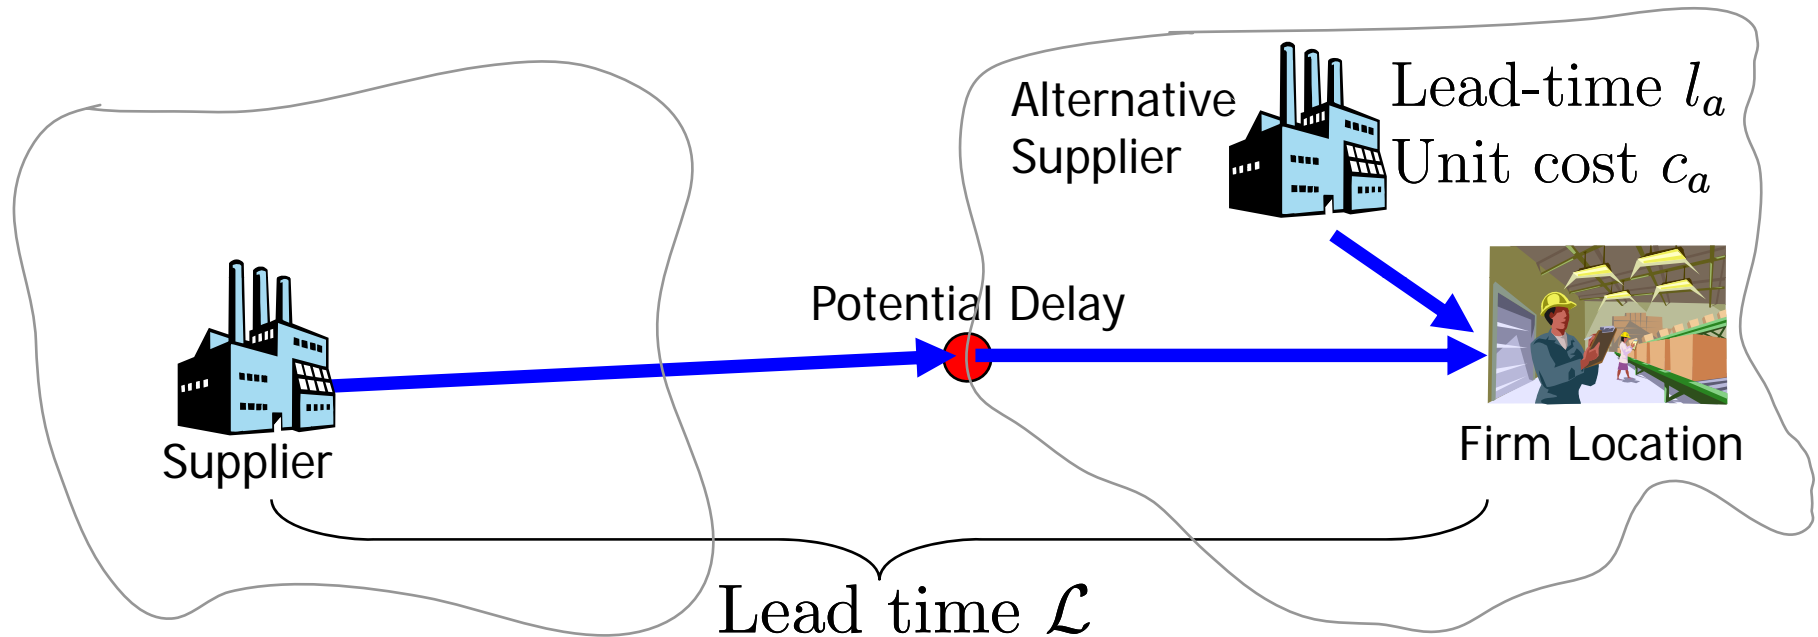

Both Decisions are made  
with Lead-time Information

# Full Lead-time Visibility (Strategy LF)

- Optimal Policy

# Sourcing Flexibility

# Sourcing Flexibility: Time Line

Simplifying Assumption :

Ordering Decision with Alternative Supplier at time  $T_a$

Ordering Decision with Regular Supplier

Ordering Decision with Alternative Supplier

---

# Sourcing Flexibility

- Three Models with
  - No Lead-time Visibility (Strategy  $SN$ )
  - Partial Lead-time Visibility (Strategy  $SP$ )
  - Full Lead-time Visibility (Strategy  $SF$ )
- Optimal Policies are Not Base-Stock Policies
- Solutions with Dynamic Programs

# Numerical Comparison

Cost Saving with Strategy  $M$

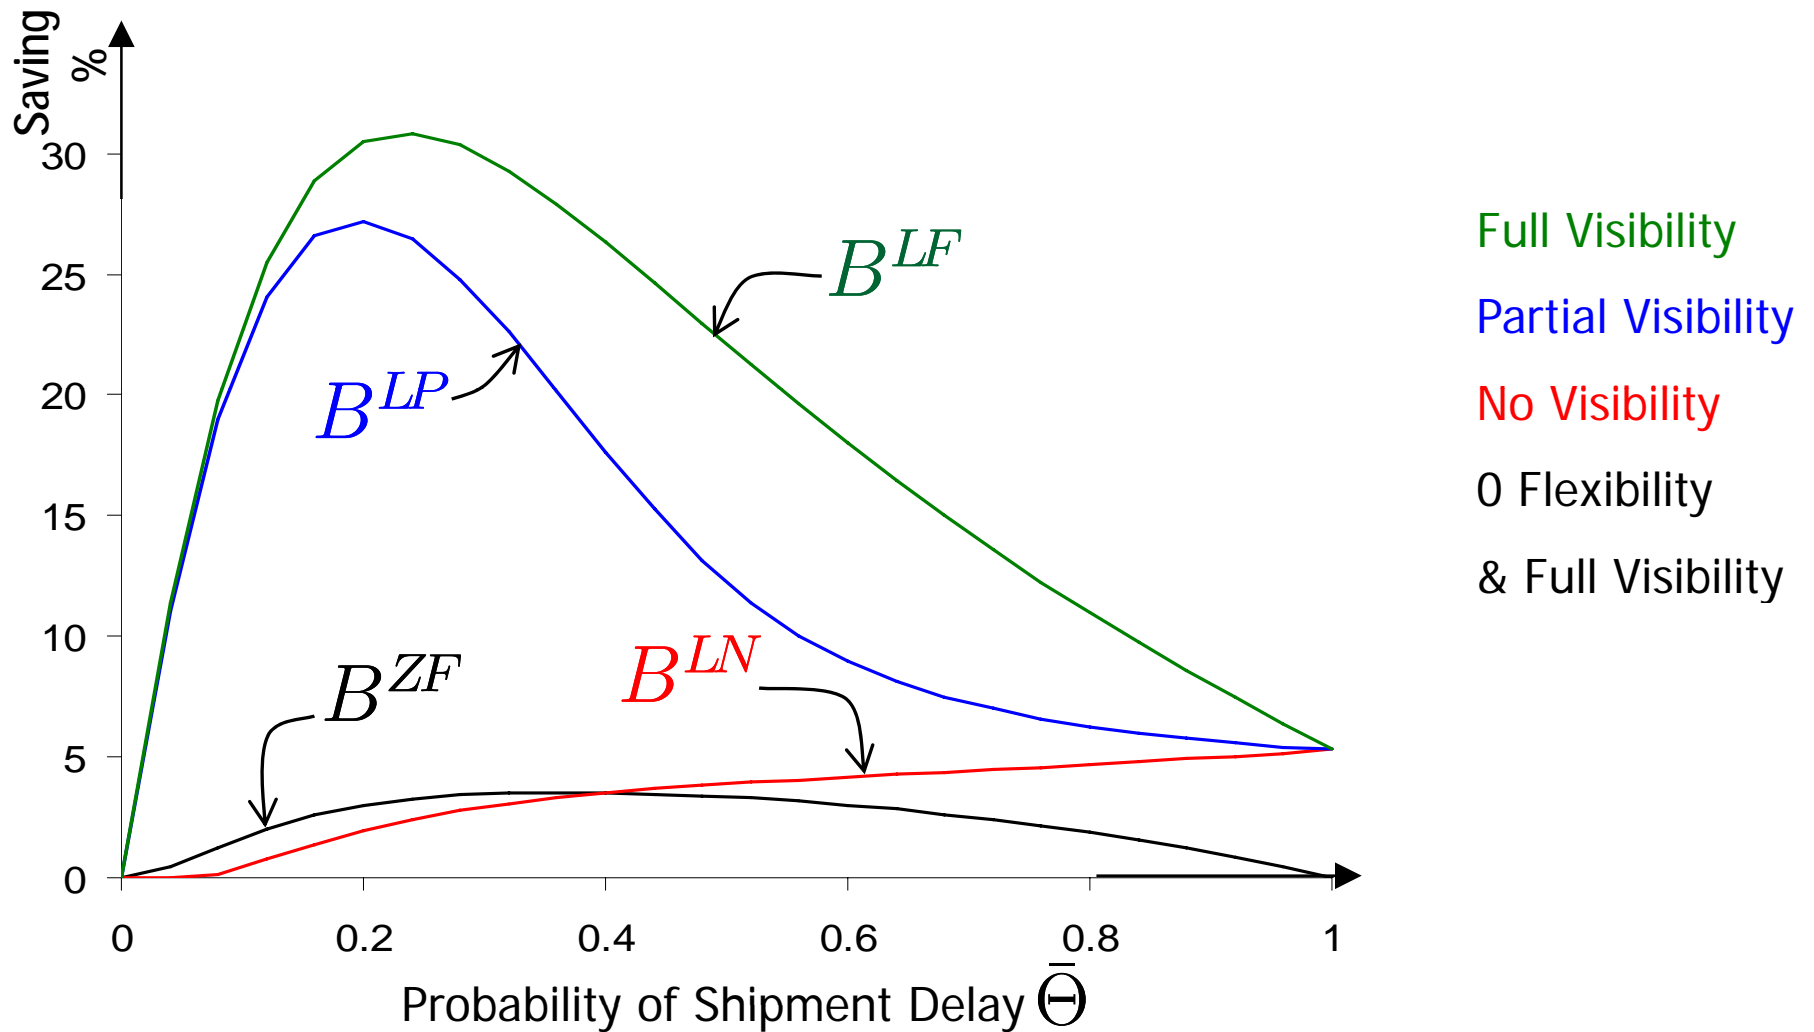

$$B^M = \frac{C^{ZN} - C^M}{C^{ZN}} \%$$

Optimal Cost with Strategy  $M$

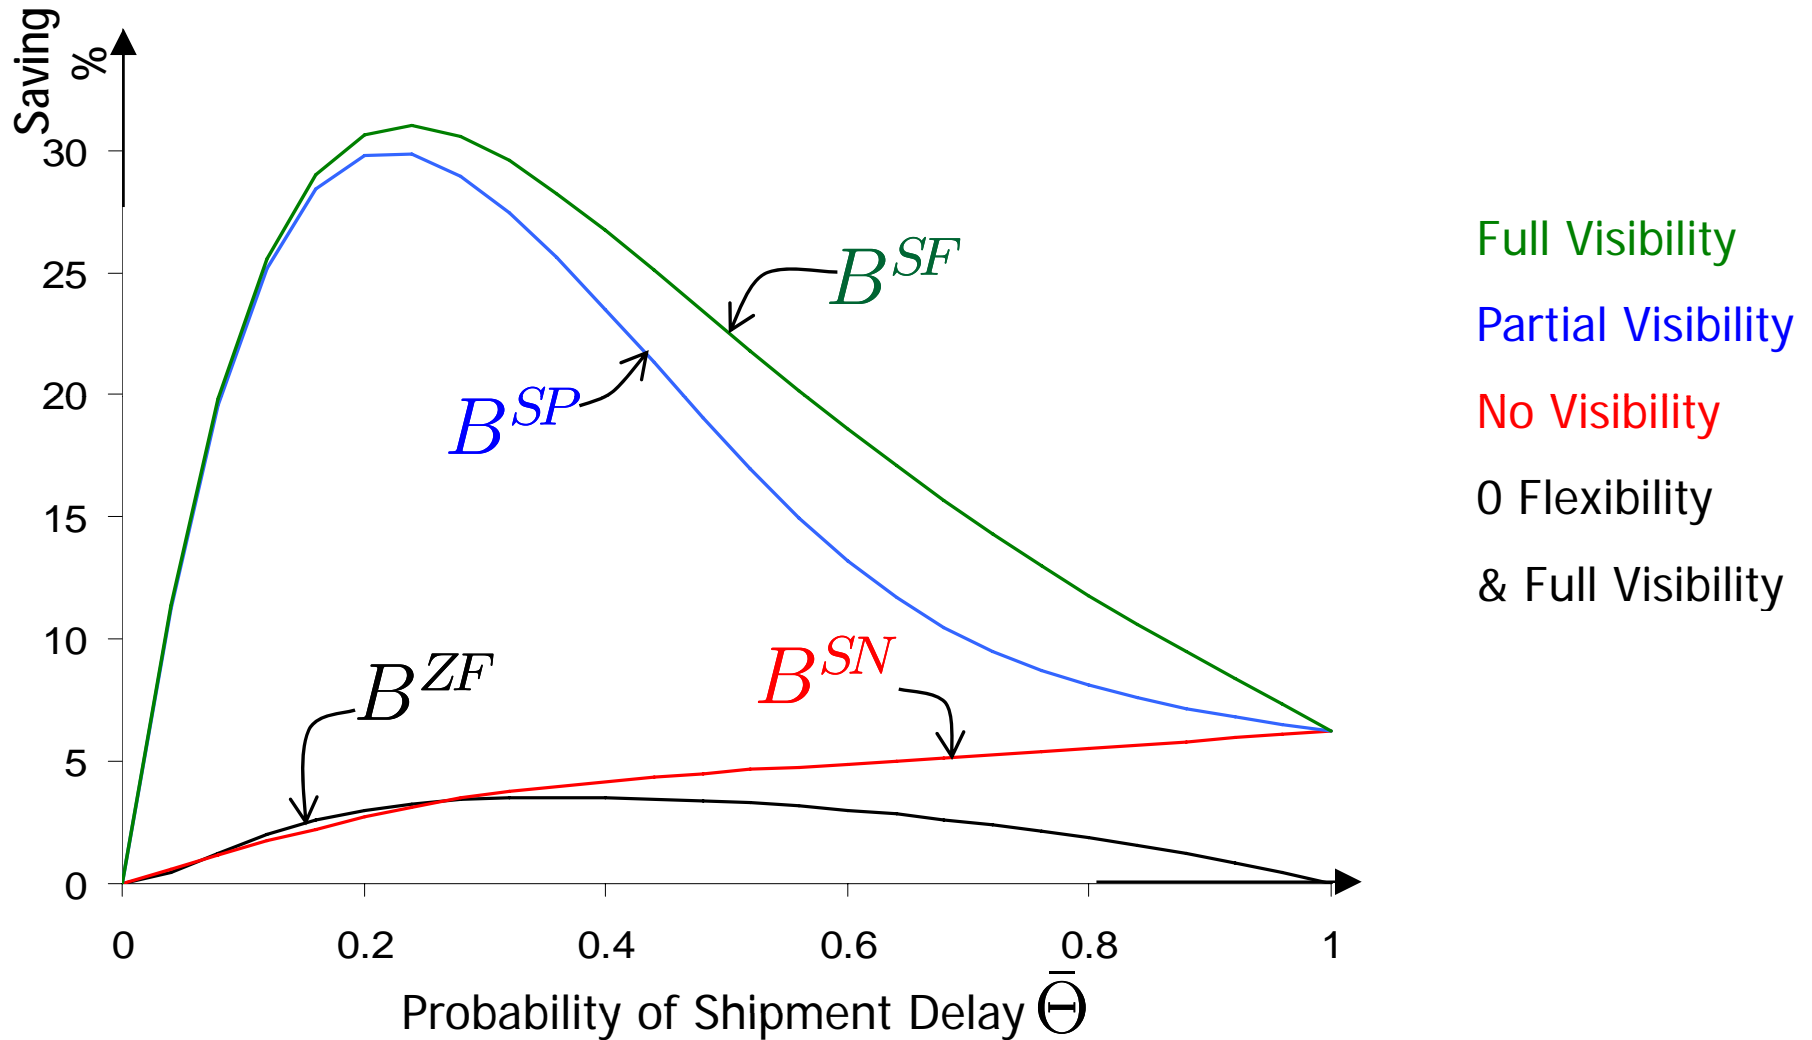

Optimal Cost with Base Case  $ZN$   
(Zero Flexibility & No Lead-time Visibility)

$$M \in \{ZF, LN, LP, LF, SN, SP, SF\}$$

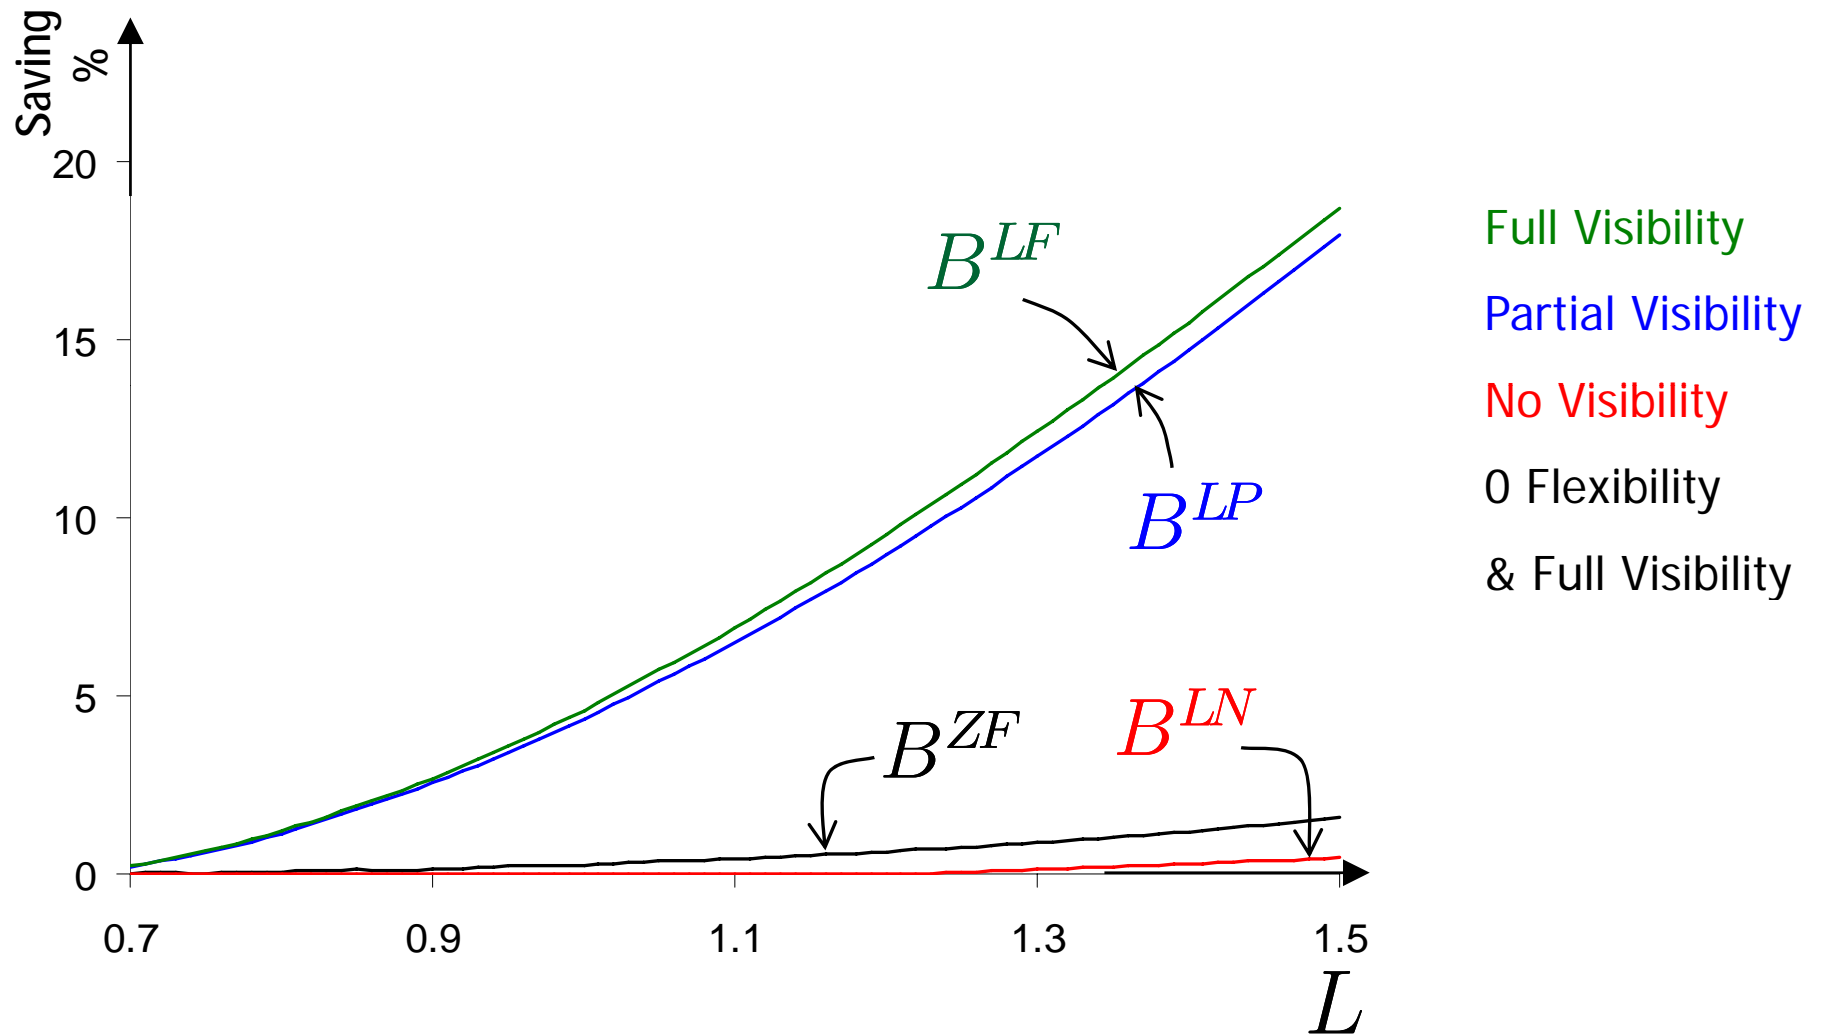

# Effect of Delay Probability (Logistics Flexibility)

# Effect of Delay Probability (Sourcing Flexibility)

# Effect of Delay Time (Logistics Flexibility)

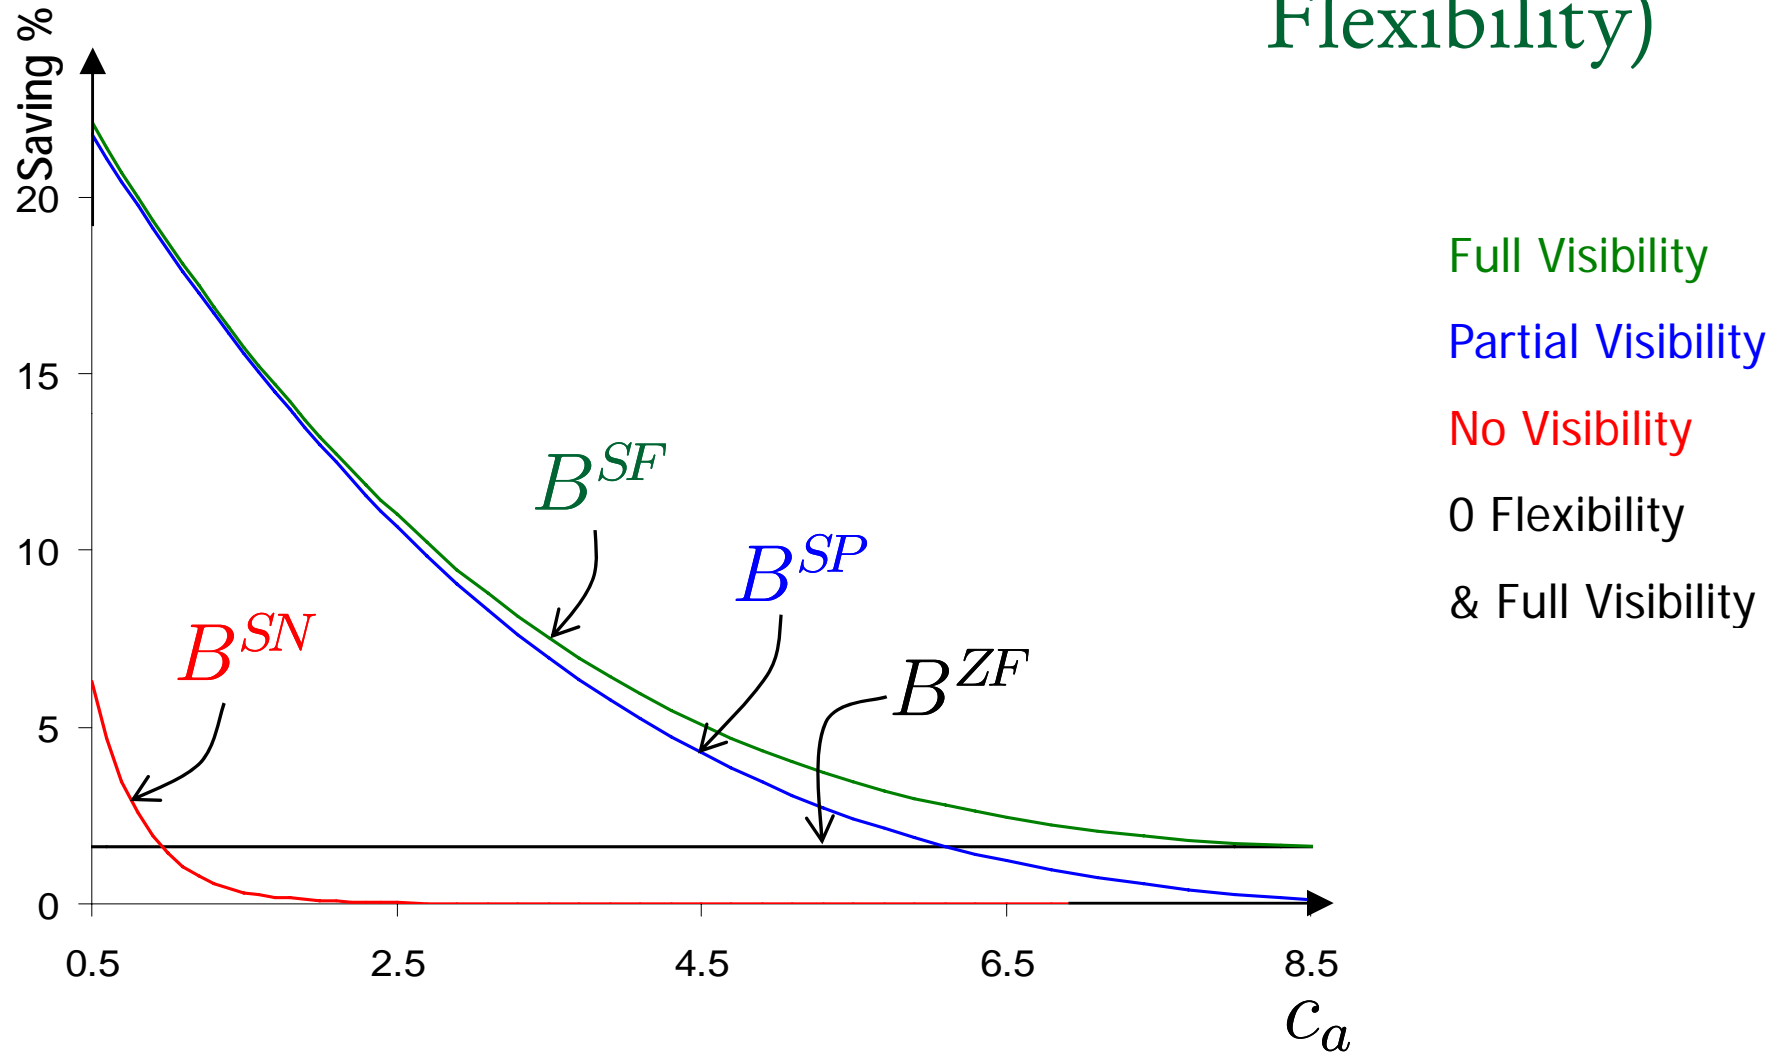

# Effect of Delay Time (Sourcing Flexibility)

# Effect of Expediting Cost (Logistics Flexibility)

# Effect of Alternative Sourcing Cost (Sourcing Flexibility)

# Effect of Demand Rate (Logistics Flexibility)

# Effect of Demand Rate (Sourcing Flexibility)

---

# Observations

- Flexibility protects from long lead-times
- Lead-time visibility protects from uncertainty in lead-times
- Operational flexibility and lead-time visibility are complementary
- Partial lead-time visibility captures most of the gains with full visibility

---

# Impact of Other Factors

- More general delays
  - Complex optimal ordering policies
  - Robust heuristics
  
- Fixed costs of Ordering/Freight Mode
  - Reduced Flexibility (Jain, Groenevelt and Rudi)
  - Scope for negotiation on Fixed vs Variable costs

---

# Impact of other factors

- Capacity constraints on freight modes
  - Real options.. How to value it?
  - Market for freight modes
- Information availability
  - Cost of providing information
  - Incentive to share timely information on delays

---

# Contribution

- Model to identify impact of operational flexibility and lead-time visibility on
  - Optimal policies
  - Costs
  
- Justification for investments in
  - Logistics and sourcing flexibility
  - Information system
